Sŏph'o-mōre, *n* One belonging to the second of the four classes in an American college, one next above a Freshman

☞ This word has generally been considered as an "American barbarism," but was probably introduced into our country, at a very early period, from the University of Cambridge, England Among the cant terms at that university, as given in the Gradus ad Cantabrigiam, we find *Soph-Mor* as "the next distinctive appellation to Freshman" It is added that "a writer in the Gentleman's Magazine thinks *mor* an abbreviation of the Greek *μωρία*, introduced at a time when the *Encomium Moriæ*, the Praise of Folly, by Erasmus, was so generally used" The ordinary derivation of the word, from *σοφός* and *μωρός*, would seem therefore, to be incorrect. The younger Sophs at Cambridge appear, formerly, to have received the adjunct *mor* (*μωρός*) to their names, either as one which they courted for the reason mentioned above, or as one given them in sport, for the supposed exhibition of inflated feeling in entering on their new honors The term, thus applied, seems to have passed, at a very early period, from Cambridge in England to Cambridge in America, as "the next distinctive appellation to Freshman," and thus to have been attached to the second of the four classes in our American colleges, while it has now almost ceased to be known, even as a cant word, at the parent institution in England, from whence it came This derivation of the word is rendered more probable by the fact that the early spelling was, to a great extent at least, Sophmore, as appears from the manuscripts of President Stiles, of Yale College, and the records of Harvard College down to the period of the American revolution This would be perfectly natural if *Soph* or *Sophister* was considered as the basis of the word, but can hardly be explained if the ordinary derivation had then been regarded as the true one *Prof C A Goodrich*

Indian summer, in the United States, a period of warm weather late in autumn, usually characterized by a clear sky, and by a hazy or smoky appearance of the atmosphere, especially near the horizon The name is derived from the custom of the Indians to use this time in preparation for winter by laying in stores of food, or from their belief that it was caused by a wind blowing directly from the court of the south-western god

The south-west is the pleasantest wind which blows in New England In the month of October, in particular, after the frosts which commonly take place at the end of September, it frequently produces two or three weeks of fair weather, in which the air is perfectly transparent, and the clouds, which float in the sky, of the purest azure, are adorned with brilliant colors This charming season is called the *Indian summer*, a name which is derived from the natives, who believe that it is caused by a wind which comes immediately from the court of their great and benevolent God Cautantowwit, or the south-western god. *Freeman*

1 An elementary sound, or a combination of elementary sounds, uttered together, or at a single effort or impulse of the voice, and constituting a word or a part of a word, the smallest separately articulated portion of a sentence

☞ The more precise theory and definition of the syllable may be succinctly set forth as follows Syllables are the successive portions or instants into which the listening ear apprehends articulate speech as divided, and their distinction depends upon the contrast of opener and closer articulations — or, in the main that of vowels and consonants In utterring *ah aqadabra*, for instance, there is an uninterrupted emission of intonated breath from the throat, a continuous effort or impulse, and the mouth organs take up successively eleven different positions of articulation, yet the ear receives the impression of five successive unities, as it is struck by the five clear and open vowel-sounds, one after another, which seem to be parted asunder by the closer and less distinct consonants The effect is the same as if *a* were uttered by five separate successive impulses of the voice, with a slight pause or cessation of utterance between each two The norm of a syllable, then, is a vowel, alone or accompanied by one or more consonants, and separated by these or by an hiatus from a preceding or following vowel, if such be present As to what sounds shall be allowed vowel value in making syllables, and as to how many and what consonants shall be combinable with a vowel in the same syllable, and in what order they shall be combined, the usage of different languages is at variance The English allows *l* (as in *able*, ā'bl, *feeble*, fē'bl) and *n* (as in *prison*, priz'n, *reckon*, rĕk'n) to form syllables, such value is given elsewhere to *r*, *m*, and even *z* Some languages, as the Hawaiian, permit only the simplest combination of a vowel with a single preceding consonant, the English stands nearly at the other end of the scale, in allowing the aggregation to the vowel of as many as three consonants before it, as in *strike*, *scream*, and as many as three or four after it, as in *bands*, *hearts*, *lurk'st*, *worlds*, *twelfths*, *sixths*, so that one syllable may contain six or seven consonants, as *strands*, *splint'st* (forms like the latter only by harsh and unnatural contraction). When opener and closer consonantal elements are combined with the same vowel, there should properly be a gradual increase of openness to the vowel, and decrease after it, as *tramp*, not *rtapm*, only an exception is allowed in favor of the sibilants, as being by their nature easily uttered in connection with consonants, while yet they are not open enough to give to the ear the impression of an independent syllable So also, surd consonantal sounds must precede sonant in beginning a syllable, and must follow them in closing one, as in *fled'st*, *shrunk*

2 In writing and printing, a part of a word separated from the rest, and capable of being pronounced by a single impulse of the voice. It may or may not correspond to a syllable in the spoken language [See Prin of Pron, § 129.]

The conclusion necessarily follows from the premises, so that, if these are true, the conclusion must be true, and the argument amounts to demonstration, as in the following example —

A plant has not the power of locomotion,
An oak is a plant,
Therefore an oak has not the power of locomotion.

Syn.—Identical, interchangeable—SYNONYMOUS, IDENTICAL If no words are *synonymous* except those which are *identical* in use and meaning, so that the one can in all cases be substituted for the other, we have scarcely ten such words in our language But the term more properly denotes that the words in question approach so near to each other, that, in many or most cases, they can be used interchangeably 1 Words may thus coincide in *certain* connections, and so be interchanged, when they can not be interchanged in other connections, thus we may speak either of *strength* of mind or of *force* of mind, but we say the *force* (not *strength*) of gravitation 2 Two words may differ slightly, but this difference may be unimportant to the speaker's object, so that he may freely interchange them, thus it makes but little difference, in most cases, whether we speak of a man's having *secured* his object or having *attained* his object For these and other causes we have numerous words which may, in many cases or connections be used interchangeably, and these are properly called *synonyms* *Synonymous* words "are words which, with great and essential resemblances of meaning, have, at the same time, small, subordinate, and partial differences,—these differences being such as either originally and on the ground of their etymology inhered in them,—or differences which they have by usage acquired in the eyes of all, or such as, though nearly latent now, they are capable of receiving at the hands of wise and discreet masters of the tongue *Synonyms* are words of like significance in the main, but with a certain unlikeness as well." *Trench*

Tĕl'e-grăm, *n.* [Gr. τῆλε, far, and γραμμα, that which is written, from γραφειν, to write, Fr. *telegramme*.] A message sent by telegraph, a telegraphic despatch.

☞ This word is of recent American origin, its first occurrence being in the following passage from the Albany Evening Journal for April 6, 1852, emanating from Mr. E. P. Smith, of Rochester. "A friend desires us to give notice that he will ask leave, at some convenient time, to introduce a new word into the vocabulary. The object of this proposed innovation is to avoid the necessity, now existing, of using two words, for which there is very frequent occasion, when one will answer. It is *telegram*, instead of *telegraphic dispatch*, or *telegraphic communication*. The word is formed according to the strictest laws of the language from which the root comes. *Telegraph* means to write from a distance, *telegram*, the writing itself executed from a distance. *Monogram*, *logogram* &c., are words formed upon the same analogy, and in good acceptation."

Morse's Telegraph.

☞ The instruments used are classed as *indicator*, *type-printing*, *symbol-printing* or *chemical-printing telegraphs*, according as the intelligence is given by the movements of a pointer or indicator as in Cooke & Wheatstone's, the form commonly used in England, or by impressing, on a fillet of paper, letters from types, as in House's and Hughes's, or dots and marks from a sharp point moved by a magnet as in Morse's, or symbols produced by electro-chemical action as in Bain's. The three latter forms, particularly Morse's, are those commonly used in the United States.

☞ In the offices in the United States where the Morse telegraph is employed the recording instrument is now little used, the operator trusting entirely to the sound caused by the opening and breaking of the circuit which, in the registering apparatus are made to trace upon a ribbon of paper the lines and dots used to represent the letters of the alphabet.
